

Hyperbaric oxygen application has now become a useful technique for both diagnostic and therapeutic purposes in CNS, cardiovascular and respiratory diseases, as well as in soft-tissue and orthopaedic pathologies and haematologic disorders. With a specific didactic approach, supported by numerous illustrations and tables, this volume aims to present all aspects of oxygen application under pressure not only to resolve some clinical problems, but also to improve recovery or to modify a negative illness evolution. Both scientists and practitioners will find this work a useful and updated reference book.
